PROBLEM STATEMENT

The aging population and individuals with health conditions lack a comprehensive healthcare solution tailored to their needs. Existing systems fall short in providing personalized health management and swift emergency response. This gap results in challenges such as delayed interventions and insufficient remote monitoring. The problem statement calls for the development of an innovative AI-powered software for smartwatches to bridge these gaps and improve the well-being of this vulnerable population.

GOALS:

- **Enhance Medication Adherence**
- **Facilitate User-Caregiver Collaboration**
- **Improve Health Monitoring and Early Intervention**

----- **PROPOSED SOLUTION** -----

To address the growing need for personalized healthcare solutions for elderly and health-compromised individuals, we propose an AI-powered health monitoring and emergency assistance software. This comprehensive solution utilizes AI algorithms to analyze real-time health data, providing caregivers with alerts for abnormal vital signs and ensuring timely interventions. Integrated medication reminders promote medication adherence, while notifications keep caregivers informed about health events. By combining sophisticated technology with personalized care, this software aims to improve the well-being of its users, offering comprehensive health monitoring and rapid response in emergencies. This solution contributes to a safer and more secure lifestyle for this vulnerable population, enhancing both health management and emergency response while prioritizing user privacy and comfort.

MODULES

User

- **Sign in using google**
- **Basic details**
- **Caregivers details and contact number**
- **Medication details**

Data

- **Vitals collection**
- **Monitoring**
- **Save data**
- **Values to verify(max and min limits)**

Alert

- **Medication alerts with medicine name and dose.**
- **Caregivers details**
- **SOS call to hospitals at emergency**

CURRENT STATE

→ **Front-end Development**

→ **Back-end Development**

→ **Model Development**

CONCLUSION

CareWave has the potential to be a valuable tool for individuals seeking to improve their health and well-being. By combining real-time heart rate monitoring with AI capabilities, and the incorporation of medication reminders and alerts, the application can provide users with personalized insights into their health and identify potential risks.
